SALT PROTECTOR PLUS™ WB
- **Resists Water, Salt and Chemical Intrusion**
- **Water Based & Environmentally-Conscious**
- **One Coat Application**
- **Deep Penetrating with Beading Action**

The Premium Defense System *for* Exterior Concrete Surfaces

The smart choice for sealing and protecting concrete:
- Driveways
- Walkways
- Patios

SALT PROTECTOR PLUS™ WB

Salt Protector Plus™ WB is a hard working concrete sealer plus water and salt repellent used to protect above-grade, exterior horizontal concrete surfaces such as driveways, walkways, patios and pool decks.

Salt Protector Plus™ WB acts as a barrier against water and salt which can damage and deteriorate exterior concrete and masonry. With its remarkable beading action, Salt Protector Plus™ WB offers visual proof of water repellency.

Untreated concrete (left) versus concrete treated with Salt Protector Plus™ WB (right).

The dramatic difference between untreated surfaces (at bottom) and those treated with Salt Protector Plus™ WB (at top) is clearly shown above.

FEATURES AND BENEFITS:

ECO-CONSCIOUS
Water-borne formulation with extremely low VOC content minimizes air-borne pollutants and is virtually odor-free.

UNIFORM SURFACE PROTECTION
Forms a uniform bond with the substrate to lock out water, salt and chemicals ensuring concrete retains its natural strength and performance throughout the four seasons.

SUPERIOR PERFORMANCE
Outperforms typical water repellents with advanced beading action!

MAXIMIZED DEPTH PENETRATION
The coating's low viscosity allows for optimal penetration and eliminates harmful surface moisture which may lead to spalling, freeze damage and rebar corrosion.

NEUTRAL AESTHETIC
The coating is colorless, non-staining and non-yellowing and won't interfere with the natural aesthetic of the concrete.
